

Application: This machine is to be used for preparing the diet for the black soldier fly larvae. This machine can homogenize feedstuff to achieve consistency. This machine can work with feedstuff with 60-100% water content with smooth fluidity. It can also be used to store and ferment feedstuff and prevent pest (i.e. housefly) infection.

Description: This is a mobile car with 350KG storage tank, equipped with a mixer in the tank to homogenize material. The outlet of the tank is a high-speed slurry gear pump that can handle material with good fluidity.

Note:

1. Battery can be replaced with locally sourced product for better adaptation.
2. No metal or other hard particles are allowed to enter the tank, otherwise will jam the gear pump.
3. When preparing wet feed, always add water first, and then add the dry material with the mixer blade spinning.
4. JM Green is providing this information to the general public.

Technical Specification	
Type	Mobile Feeding Car
Material	
Body	Stainless Steel
Pump	High-Speed Slurry Gear-Pump
Pipe	Explosion Protection Flexible Tube, 2.5 inch
Power	Battery
Charger	48V 32A
Battery	48V 32A
Movement	Forward/Backward
Remote Control	Yes
Capacity	350KG
Dimensions	
L x W x H	1300 x 800 x 1250mm
Weight	300KG
Mercury/Lead Content	None
Warranty	1 year limited
